Its 20 GOOD planes!By A CustomerMy dad bought this book for me years ago, and I memorized and still fold some of the designs whenever I feel down. Anytime I see a somebody make a standard, pointy tip airplane, I make the Starfighter or APDW and blow them away! I only had difficulty folding one plane, but they all fly quite well.0 of 0 people found the following review helpful. Excellent bookBy JackalYou get a bit of "theory" about flying paper planes. Then a lot of detailed instructions of how to fold planes. My only problem is that the descriptions are not at all that obvious many times. So don't expect just to flip open the book and then just fold a plane at random. The book requires a bit more study than that. So with this in mind I think this book is more aimed at parents with kids rather than the kids themselves. Unless the kid has a great deal of ability to read and follow instructions and do not give up easily. So my advice is to buy this book and spend some time reading it and then you can get the kids involved.Finally I want to give another recommendation if you have kids (typically boys) around you: Mark Wilson's Complete Course in Magic. It will also require work from you before introducing it to the kids. Maybe you take a photocopy of a trick and give it to the kids, but only after you've learnt the trick yourself. It is actually not that hard!2 of 2 people found the following review helpful. Great planes, for older kidsBy akaudreyThe good first: These planes are GREAT. My kids and I have made a lot of planes and these are the best planes we've seen. I'm not one to want to spend a lot of time trying to tweak a plane to get it to fly, and we didn't

have to with these. We could play catch across the living room, they fly so accurately. We haven't made all of them, but even the "specialty" planes we've made fly well. The Starfighter is my favorite. Flies awesome and looks awesome, too. The not-so-good: I bought this book for my 7 year-old. The planes are too difficult for him to make on his own. In order to save paper space, the author often refers to other planes as starting points. If you have the other planes memorized, that's fine. Unfortunately, it means a lot of flipping around if you're just starting or haven't looked at it in a while. Same thing with the flip-through animation for tips. You have to leave the page you're on to see how to make certain folds. Despite those things, I gave the book five stars because the planes themselves are so fun. Just don't expect it to be an independent project for younger kids.

THE GLIDING FLIGHT is a return to paper airplane basics: one person, one piece of paper, and a few folds later, one airplane. Using a refreshingly inventive approach to designs and flying characteristics, you can make 20 original paper planes, such as the Stealth, the Wind Devil, the Glart, and the Skid Kid. The book's flip-book animation demonstrates the basic origami folds, with clear step-by-step assembly for each design. A crease here and there is all you need to create high-performance aircraft no scissors, no glue. In the current age of electronic toys, THE GLIDING LIGHT proves you can still have fun with a simple sheet of paper and a little imagination.

From the Publisher Includes flip-book illustrations showing the key folds and details on flying and aerodynamic theory. Includes flip-book illustrations showing the key folds and details on flying and aerodynamic theory. From the Author Includes the coolest looking plane from the new movie "Paper Planes". The Star Fighter, an internationally award winning design is featured in the movie. It's the wind tunnel tested super plane used by the villain to win contest after contest. About the Author JOHN M. COLLINS has been flying paper airplanes over and around Californias Marin County and San Francisco for more than 20 years. John is currently the news production supervisor for KRON TV in San Francisco, having directed their newscasts for 18 years. In addition to inventing world-class paper airplanes, John also enjoys origami, boomerangs, windsurfing, stunt kites, and screenwriting.
